

Nordjysk Projektledelse

Aalborg Renewables member portrait

Nordjysk Projektledelse provides on-demand services, utilizing skilled external project managers to tackle project challenges professionally. With Nordic values of trust and integrity, Nordjysk Projektledelse specializes in guiding projects through the green transition. The diverse team, including experts in marine, mechanical, and electrical engineering, upholds high standards verified through EPI testing.

Opportunities and challenges

Nordjysk Projektledelse optimizes energy and green transition projects for clients, enhancing industry through strategic partnerships to address staffing shortages and knowledge sharing challenges. Nordjysk Projektledelse also trains junior staff to meet industry demands, ensuring project success and minimizing issues like sick leave and stress.

Projects and cases

Nordjysk Projektledelse has tackled a variety of projects including technology

development, Turnkey, Wind, power2x, Biogas, and innovative green initiatives. Recently, a Senior Project Manager from the team assisted a major company in the wind turbine industry by taking control of a large R&D project that had derailed. The project manager successfully delivered the project on schedule, within scope, and achieved cost savings exceeding kr. 400,000.

Looking to the future

Nordjysk Projektledelse foresees a scarcity of professional project managers experienced in renewable energy, particularly as the wind turbine industry requires approximately 40,000 headcounts to meet Denmark's green 2030 goals. It's crucial for companies to adapt by being more open to hiring external project managers to drive upcoming green transition projects. With a focus on collaboration, Nordjysk Projektledelse actively builds relationships and networks to collectively strengthen and optimize the green transition.
